ABOUT ME

Third-year Computer Engineering student focused on software development and engineering. Have built projects across web apps, databases, and systems through coursework and personal work. Looking to gain real dev experience and grow from there.

EDUCATION

Pampanga State University | 2023 - Present

TECHNICAL SKILLS

- Languages: Java, C++, JavaScript, Python
 - Web: HTML, CSS
 - Databases: MySQL, Firebase (Firestore, Realtime Database)
 - Tools: Git, GitHub, VS Code, NetBeans, Arduino IDE, XAMPP
-

PROJECTS

May 2026

ESP32-CAM Health Monitor

Built a portable health monitoring device using an ESP32-CAM, handling the Arduino and Python programming, sensor integration, and system architecture for real-time data flow.

May 2026

Digital Signal Processing Application

Worked on the backend of a desktop signal processing app – built out the data processing and analysis features, and kept the frontend functional so both sides held together.

December 2025

OS Algorithm Visualizer

Co-built a web-based OS simulator covering CPU scheduling and page replacement algorithms. Owned the Firebase auth flow: login, registration, password recovery, and user management, plus contributed across frontend and backend.

May 2025

Numerical Methods Matrix Calculator

Co-built the frontend of a web app for solving systems of linear equations – Cramer's Rule, Gaussian Elimination, Gauss-Jordan, and LU Decomposition – in HTML, CSS, and JavaScript.

May 2025

Point-of-Sale & Inventory Management System

Built a Java-based POS and inventory management system in Apache NetBeans with a MySQL backend. Handled both sides of the stack – inventory tracking, sales processing, database integration, and owner authentication.

May 2025

JDM Car Showcase Web App

Co-developed a JDM car showcase web app, handling Firebase integration and backend development. Built a real-time review system that lets users submit and instantly see reviews reflected on the site.
